

CS162

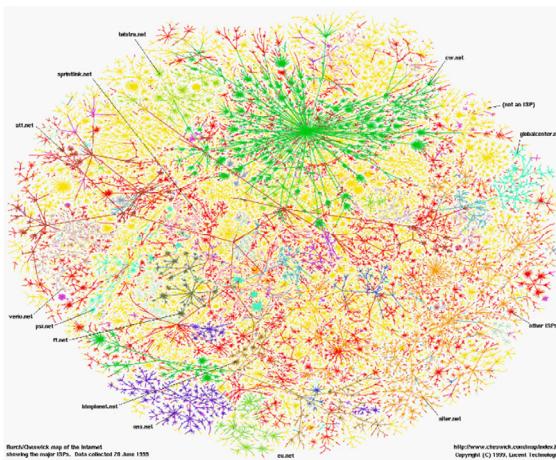

Operating Systems and Systems Programming

Lecture 1

What is an Operating System?

January 18th, 2022

Prof. Anthony Joseph and John Kubiatowicz
<http://cs162.eecs.Berkeley.edu>

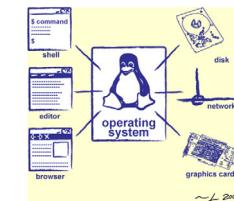

Joseph & Kubiatowicz CS162 @ UICB Spring 2022

Lec 13

Goals for Today

- What is an Operating System?
 - And – what is it not?
 - What makes Operating Systems so exciting?
 - Oh, and “How does this class operate?”

Interactive is important
Ask Questions!

Slides courtesy of David Culler, Anthony D. Joseph, John Kubiatowicz, Ajay Shankar, George Necula, Alex Aiken, Eric Brewer, Ras Bodik, Ion Stoica, Doug Tygar, and David Wagner.

Lec 1.2

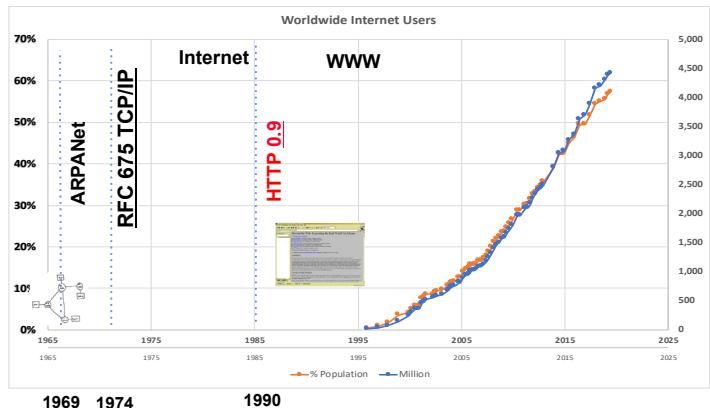

Greatest Artifact of Human Civilization...

Joseph & Kubiatowicz CS162 @ UCB Spring 2022

Lec 14

Running Systems at Internet Scale

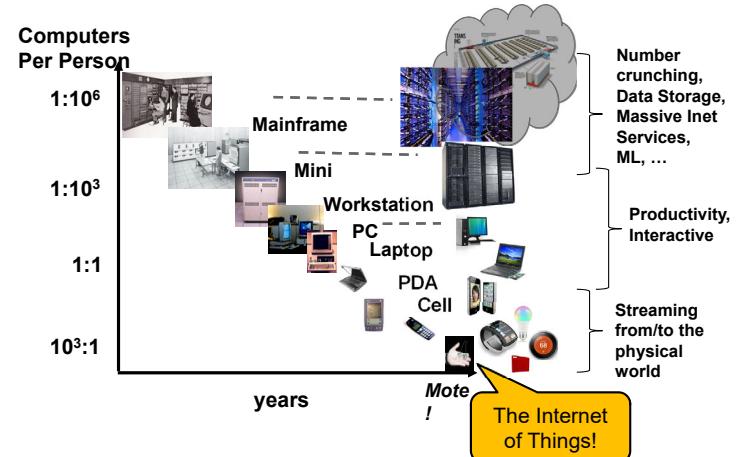

1/18/2022

Joseph & Kubiatowicz CS162 © UCB Spring 2022

Lec 1.5

Across Incredible Diversity

Bell's Law:
New
computer
class every
10 years

1/18/2022

Joseph & Kubiatowicz CS162 © UCB Spring 2022

Lec 1.6

And Range of Timescales

Jeff Dean:
“Numbers Everyone
Should Know”

L1 cache reference	0.5 ns
Branch mispredict	5 ns
L2 cache reference	7 ns
Mutex lock/unlock	25 ns
Main memory reference	100 ns
Compress 1K bytes with Zippy	3,000 ns
Send 2K bytes over 1 Gbps network	20,000 ns
Read 1 MB sequentially from memory	250,000 ns
Round trip within same datacenter	500,000 ns
Disk seek	10,000,000 ns
Read 1 MB sequentially from disk	20,000,000 ns
Send packet CA->Netherlands->CA	150,000,000 ns

1/18/2022

Joseph & Kubiatowicz CS162 © UCB Spring 2022

Lec 1.7

Operating Systems are at the Heart of it All!

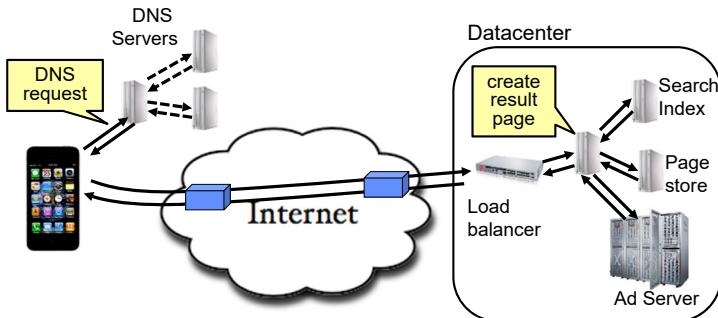

- Make the incredible advance in the underlying technology available to a rapidly evolving body of applications
 - Provide **consistent abstractions** to applications, even on different hardware
 - Manage **sharing of resources** among multiple applications
- The key building blocks:
 - Processes
 - Threads, Concurrency, Scheduling, Coordination
 - Address Spaces
 - Protection, Isolation, Sharing, Security
 - Communication, Protocols
 - Persistent storage, transactions, consistency, resilience
 - Interfaces to all devices

1/18/2022

Joseph & Kubiatowicz CS162 © UCB Spring 2022

Lec 1.8

Example: What's in a Search Query?

- Complex interaction of multiple components in multiple administrative domains
 - Systems, services, protocols, ...

1/18/2022

Joseph & Kubiatowicz CS162 © UCB Spring 2022

Lec 1.9

But: What is an operating system?

Lec 1.10

What does an Operating System do?

- Most Likely:
 - Memory Management
 - I/O Management
 - CPU Scheduling
 - Communications? (Does Email belong in OS?)
 - Multitasking/multiprogramming?
- What about?
 - File System?
 - Multimedia Support?
 - User Interface?
 - Internet Browser? ☺
- Is this only interesting to Academics??

1/18/2022

Joseph & Kubiatowicz CS162 © UCB Spring 2022

Lec 1.11

Definition of an Operating System

- No universally accepted definition
- “Everything a vendor ships when you order an operating system” is good approximation
 - But varies wildly
- “The one program running at all times on the computer” is the **kernel**
 - Everything else is either a system program (ships with the operating system) or an application program

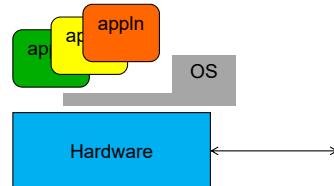

1/18/2022

Joseph & Kubiatowicz CS162 © UCB Spring 2022

Lec 1.12

One Definition of an Operating System

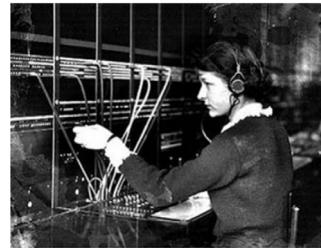

- Special layer of software that provides application software access to hardware resources
 - Convenient abstraction of complex hardware devices
 - Protected access to shared resources
 - Security and authentication
 - Communication

1/18/2022

Joseph & Kubitowicz CS162 © UCB Spring 2022

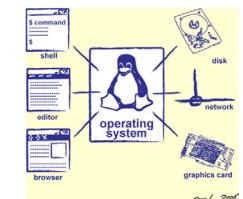

Lec 1.13

Switchboard Operator

Computer Operators

Operating System

Operating System

What makes something a **system**?

- Multiple interrelated parts
 - Each potentially interacts with the others
- Robustness requires an **engineering mindset**
 - Meticulous error handling, defending against malicious careless users
 - Treating the computer as a concrete machine, with all of its limitations and possible failure cases

System programming is an important part of this class!

1/18/2022

Joseph & Kubitowicz CS162 © UCB Spring 2022

Lec 1.15

Operating System

Switchboard Operator

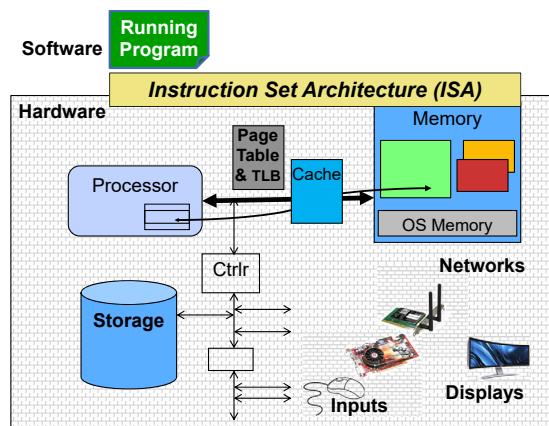

Computer Operators

Joseph & Kubitowicz CS162 © UCB Spring 2022

Lec 1.14

Hardware/Software Interface

What you learned in
CS 61C – Machine
Structures (and C)

The OS abstracts
these hardware details
from the application

1/18/2022

Joseph & Kubitowicz CS162 © UCB Spring 2022

Lec 1.15

1/18/2022

Joseph & Kubitowicz CS162 © UCB Spring 2022

Lec 1.16

What is an Operating System?

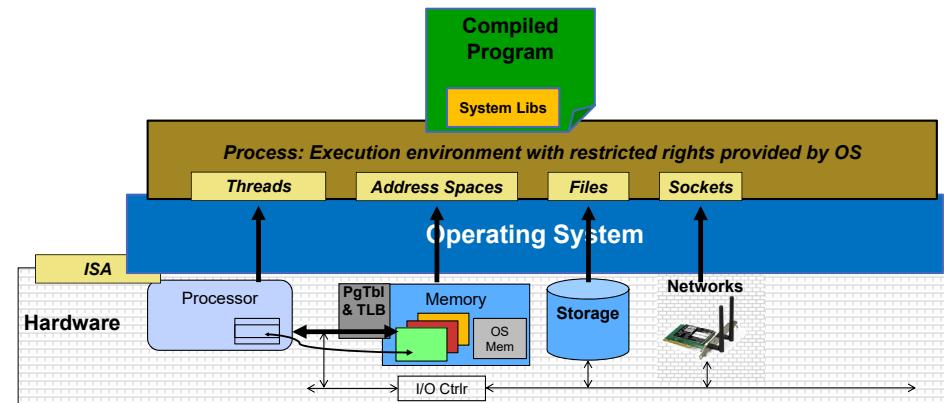

- Illusionist
 - Provide clean, easy-to-use abstractions of physical resources
 - » Infinite memory, dedicated machine
 - » Higher level objects: files, users, messages
 - » Masking limitations, virtualization

1/18/2022

Joseph & Kubitowicz CS162 © UCB Spring 2022

Lec 1.17

OS Basics: Virtualizing the Machine

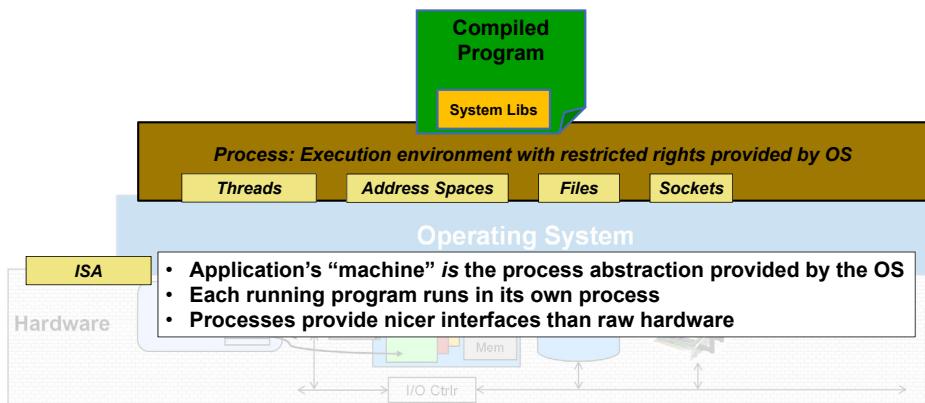

1/18/2022

Joseph & Kubitowicz CS162 © UCB Spring 2022

Lec 1.18

Compiled Program's View of the World

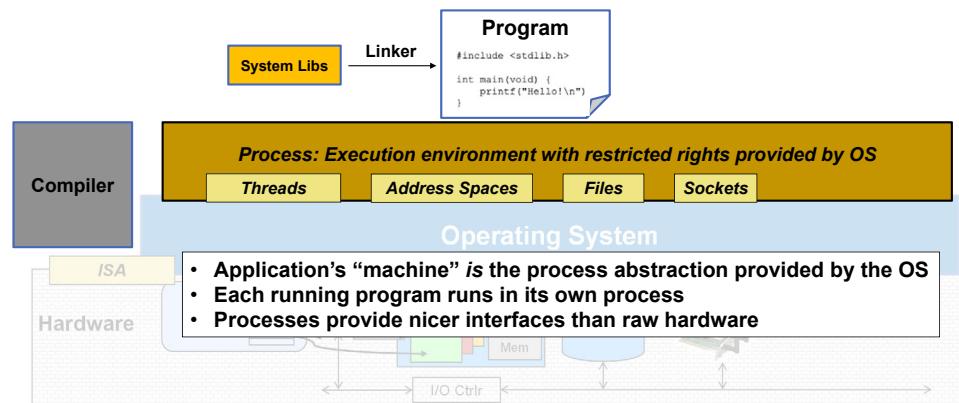

1/18/2022

Joseph & Kubitowicz CS162 © UCB Spring 2022

Lec 1.19

System Programmer's View of the World

1/18/2022

Joseph & Kubitowicz CS162 © UCB Spring 2022

Lec 1.20

What's in a Process?

A process consists of:

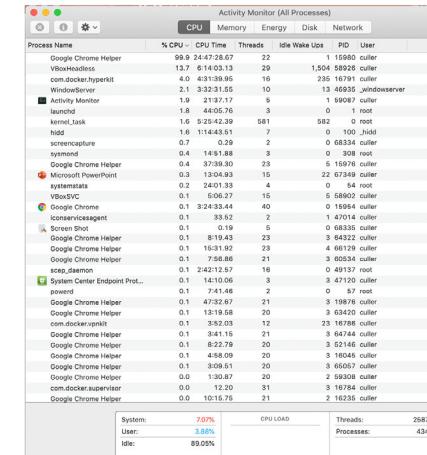

- Address Space
- One or more threads of control executing in that address space
- Additional system state associated with it
 - Open files
 - Open sockets (network connections)
 - ...

1/18/2022

Joseph & Kubiakowicz CS162 © UCB Spring 2022

Lec 1.21

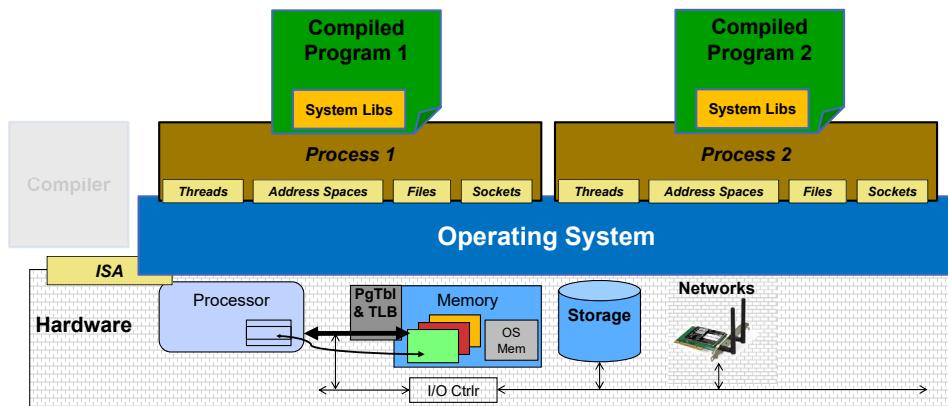

For Example...

Joseph & Kubiakowicz CS162 © UCB Spring 2022

Lec 1.22

Operating System's View of the World

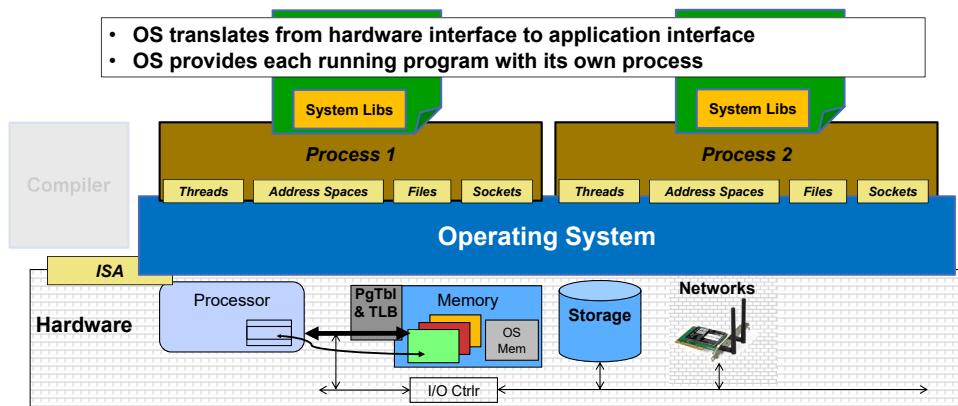

1/18/2022

Joseph & Kubiakowicz CS162 © UCB Spring 2022

Lec 1.23

Operating System's View of the World

- OS translates from hardware interface to application interface
- OS provides each running program with its own process

1/18/2022

Joseph & Kubiakowicz CS162 © UCB Spring 2022

Lec 1.24

What is an Operating System?

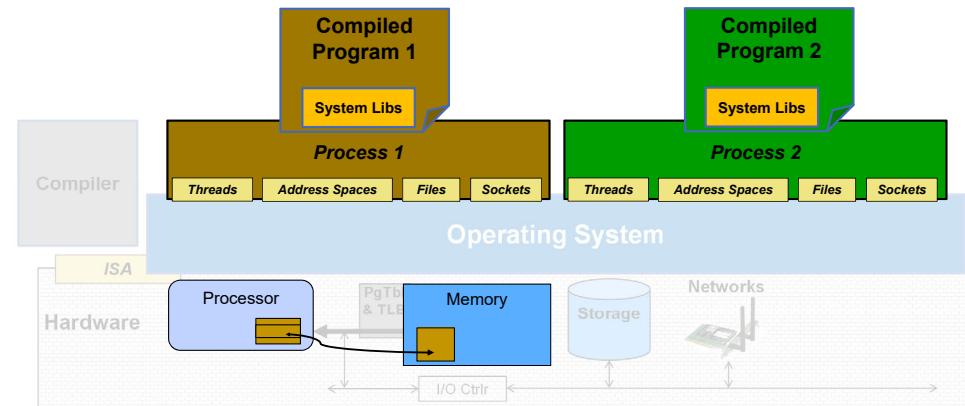

- Referee
 - Manage protection, isolation, and sharing of resources
 - » Resource allocation and communication
- Illusionist
 - Provide clean, easy-to-use abstractions of physical resources
 - » Infinite memory, dedicated machine
 - » Higher level objects: files, users, messages
 - » Masking limitations, virtualization

1/18/2022

Joseph & Kubitowicz CS162 © UCB Spring 2022

Lec 1.25

OS Basics: Running a Process

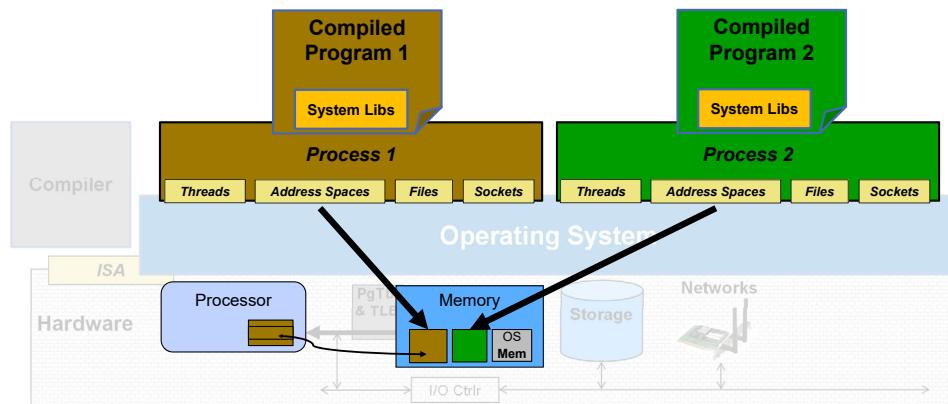

1/18/2022

Joseph & Kubitowicz CS162 © UCB Spring 2022

Lec 1.26

OS Basics: Switching Processes

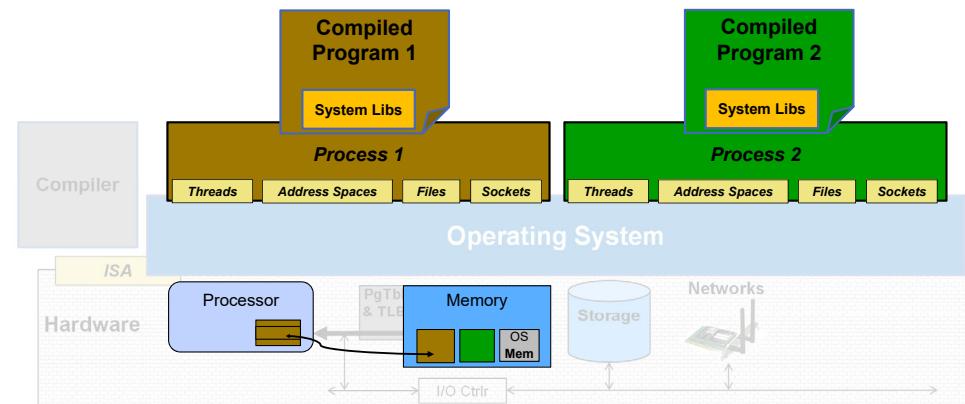

1/18/2022

Joseph & Kubitowicz CS162 © UCB Spring 2022

Lec 1.27

OS Basics: Switching Processes

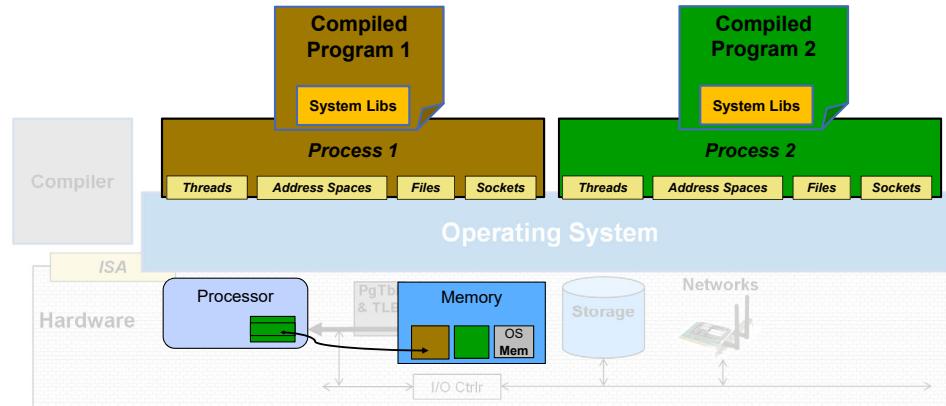

1/18/2022

Joseph & Kubitowicz CS162 © UCB Spring 2022

Lec 1.28

OS Basics: Switching Processes

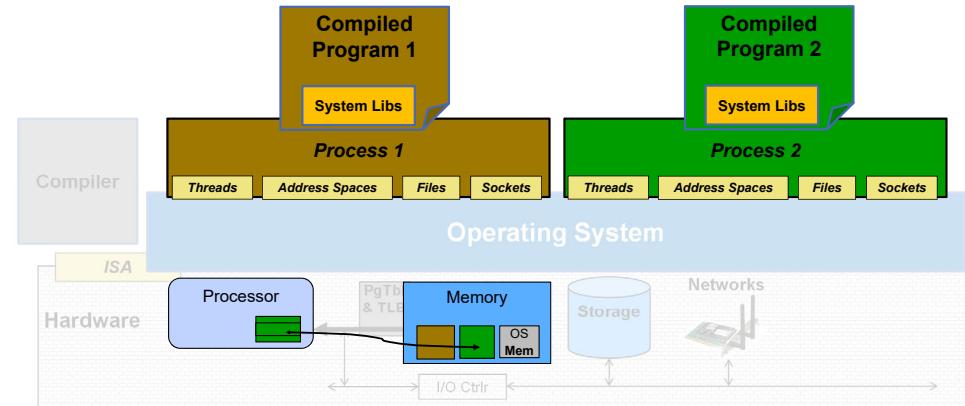

1/18/2022

Joseph & Kubiakowicz CS162 © UCB Spring 2022

Lec 1.29

OS Basics: Switching Processes

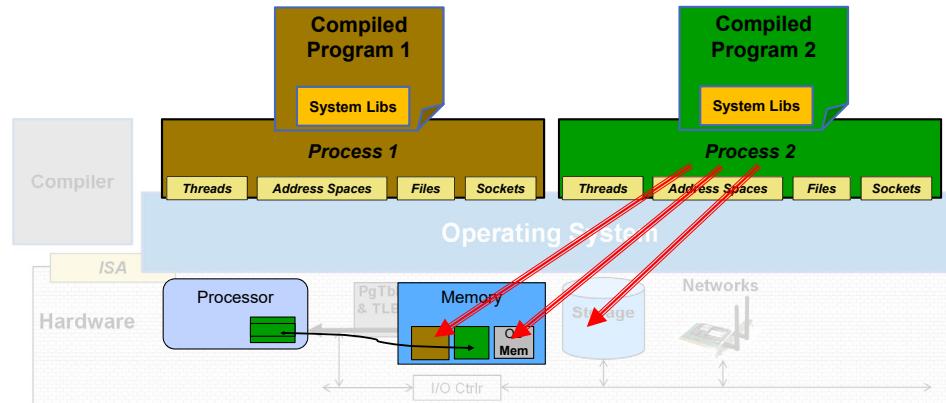

1/18/2022

Joseph & Kubiakowicz CS162 © UCB Spring 2022

Lec 1.30

OS Basics: Protection

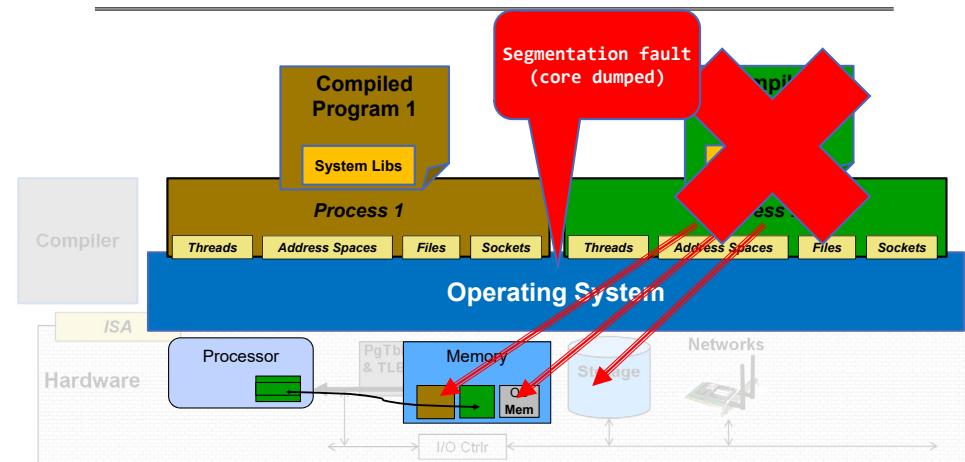

1/18/2022

Joseph & Kubiakowicz CS162 © UCB Spring 2022

Lec 1.31

OS Basics: Protection

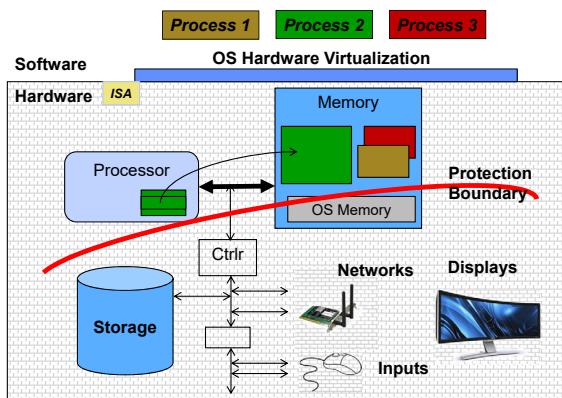

1/18/2022

Joseph & Kubiakowicz CS162 © UCB Spring 2022

Lec 1.32

OS Basics: Protection

- OS isolates processes from each other
- OS isolates itself from other processes
- ... even though they are actually running on the same hardware!

1/18/2022

Joseph & Kubiakowicz CS162 © UCB Spring 2022

Lec 1.33

What is an Operating System?

- Referee
 - Manage protection, isolation, and sharing of resources
 - » Resource allocation and communication
- Illusionist
 - Provide clean, easy-to-use abstractions of physical resources
 - » Infinite memory, dedicated machine
 - » Higher level objects: files, users, messages
 - » Masking limitations, virtualization
- Glue
 - Common services
 - » Storage, Window system, Networking
 - » Sharing, Authorization
 - » Look and feel

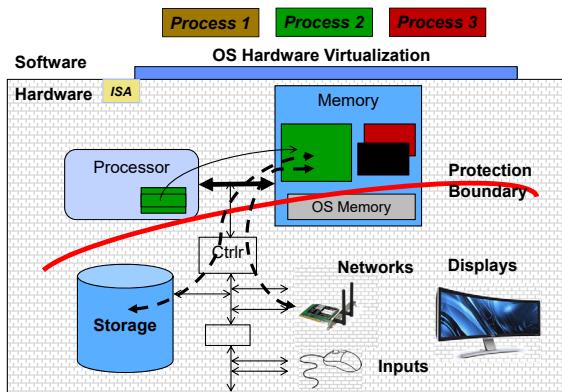

1/18/2022

Joseph & Kubiakowicz CS162 © UCB Spring 2022

Lec 1.34

OS Basics: I/O

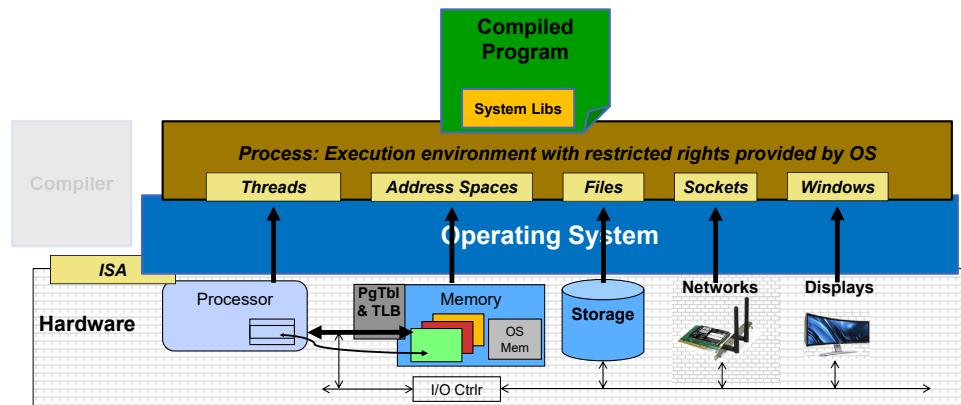

- OS provides common services in the form of I/O

1/18/2022

Joseph & Kubiakowicz CS162 © UCB Spring 2022

Lec 1.35

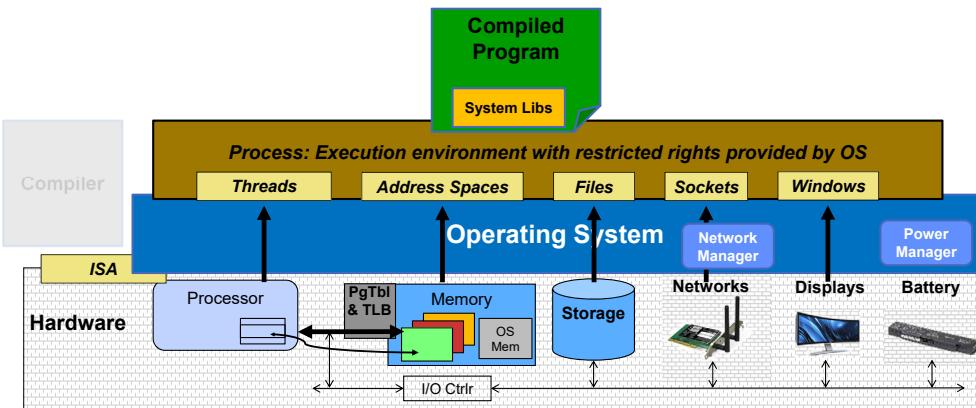

1/18/2022

Joseph & Kubiakowicz CS162 © UCB Spring 2022

Lec 1.36

OS Basics: Background Management

1/18/2022

Joseph & Kubiakowicz CS162 © UCB Spring 2022

Lec 1.37

What is an Operating System?

- Referee
 - Manage protection, isolation, and sharing of resources
 - » Resource allocation and communication
- Illusionist
 - Provide clean, easy-to-use abstractions of physical resources
 - » Infinite memory, dedicated machine
 - » Higher level objects: files, users, messages
 - » Masking limitations, virtualization
- Glue
 - Common services
 - » Storage, Window system, Networking
 - » Sharing, Authorization
 - » Look and feel

1/18/2022

Joseph & Kubiakowicz CS162 © UCB Spring 2022

Lec 1.38

Why take CS162?

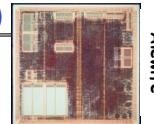

- Some of you will actually design and build operating systems or components of them.
 - Perhaps more now than ever
- Many of you will create systems that utilize the core concepts in operating systems.
 - Whether you build software or hardware
 - The concepts and design patterns appear at many levels
- All of you will build applications, etc. that utilize operating systems
 - The better you understand their design and implementation, the better use you'll make of them.

John Kubiakowicz
(KUBI)

Who am I? John Kubiakowicz (Prof "Kubi")

- Background in Hardware Design
 - Alewife project at MIT
 - Designed CMMU, Modified SPARC processor
 - Helped to write operating system
- Background in Operating Systems
 - Worked for Project Athena (MIT)
 - OS Developer (device drivers, network file systems)
 - Worked on Clustered High-Availability systems.
- Peer-to-Peer
 - OceanStore project – Store your data for 1000 years
 - Tapestry and Bamboo – Find your data around globe
 - One of the first cloud storage projects! (Before the cloud!)
- Quantum Computing
 - Exploring architectures for quantum computers
 - CAD tool set yields some interesting results
- SwarmLAB/Berkeley Lab for Intelligent Edge
 - Global Data Plane (GDP)/DataCapsules
 - Fog Robotics
 - Hardened Data Containers

Alewife

Tessellation

OceanStore

Global Data Plane

Lec 1.39

1/18/2022

Joseph & Kubiakowicz CS162 © UCB Spring 2022

Lec 1.40

Who is he? Anthony D. Joseph

Anthony Joseph

- Chancellor's Professor in Electrical Engineering and Computer Science
 - 465 Soda Hall (RISE Lab), <http://www.cs.berkeley.edu/~adj/>
 - Faculty Director of Fung Institute for Engineering Leadership, <https://funginstitute.berkeley.edu>
 - Campus Cyber-Risk Responsible Executive, co-chair EECS dept IT committee
- Research areas:
 - Fog Robotics (edge computing), Secure Machine Learning (SecML), DETER security testbed
 - Previous: Modin (drop-in Pandas replacement), Cloud computing (Apache Mesos), Cancer Genomics/Precision Medicine (ADAM/Apache Spark), Peer-to-Peer networking (Tapestry), Mobile computing, Wireless/Cellular networking
- Outside Activities
 - Big Data and Apache Spark BerkeleyX MOOCs ('15/'16 >240k students with >11% finishing)
 - Unite Genomics co-founder (focused on rare diseases treatments)

1/18/2022

Joseph & Kubiatowicz CS162 © UCB Spring 2022

Lec 1.41

Enrollment

- **This term class size is extremely limited for funding reasons**
 - Right now, we are limited at 327 students
 - We are working on securing another section
 - » If this happens, we will let students in automatically
 - Please do not email us asking for special reordering of the waitlist!
 - » Ordering is dictated by department policy!
- **This is an Early Drop Deadline course (January 28th)**
 - If you are not serious about taking this class, please drop early
 - » Department will continue to admit students as other students drop
 - Really hard to drop afterwards!
 - » Don't forget to keep up with work if you are still on the waitlist!
- **As long as you are on the waitlist or applying for concurrent enrollment, you must do the work!**
 - If you are no longer interested in the course, please remove yourself from waitlist

1/18/2022

Joseph & Kubiatowicz CS162 © UCB Spring 2022

Lec 1.43

CS162 TAs: Sections TBA

Alina Dan

Nicholas Figueira

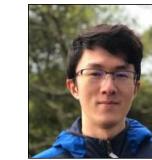

Paras Jain

Sean Kim
(Head TA)

Francis Pan

Willis Wang

Edward Zeng

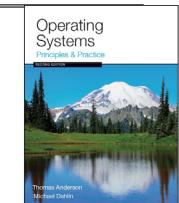

1/18/2022

Joseph & Kubiatowicz CS162 © UCB Spring 2022

Lec 1.42

Infrastructure, Textbook & Readings

- Infrastructure
 - Website: <http://cs162.eecs.berkeley.edu>
 - Piazza: <https://piazza.com/berkeley/spring2022/cs162>
 - Lecture Recordings: Tentatively as links off main class page (next day)
- Textbook: Operating Systems: Principles and Practice (2nd Edition) Anderson and Dahlin
 - Suggested readings posted along with lectures
 - Try to keep up with material in book as well as lectures
- Supplementary Material
 - Operating Systems: Three Easy Pieces, by Remzi and Andrea Arpaci-Dusseau, available for free online
 - Linux Kernel Development, 3rd edition, by Robert Love
- Online supplements
 - See course website
 - Includes Appendices, sample problems, etc.
 - Networking, Databases, Software Eng, Security
 - Some Research Papers!

1/18/2022

Joseph & Kubiatowicz CS162 © UCB Spring 2022

Lec 1.44

Syllabus

- OS Concepts: How to Navigate as a Systems Programmer!
 - Process, I/O, Networks and Virtual Machines
- Concurrency
 - Threads, scheduling, locks, deadlock, scalability, fairness
- Address Space
 - Virtual memory, address translation, protection, sharing
- File Systems
 - I/O devices, file objects, storage, naming, caching, performance, paging, transactions, databases
- Distributed Systems
 - Protocols, N-Tiers, RPC, NFS, DHTs, Consistency, Scalability, multicast
- Reliability & Security
 - Fault tolerance, protection, security
- Cloud Infrastructure

1/18/2022

Joseph & Kubiatowicz CS162 © UCB Spring 2022

Lec 1.45

Learning by Doing

- Individual Homeworks (2-3 weeks) - preliminary
 - 0. Tools & Environment, Autograding, recall C, executable
 - 1. Lists in C
 - 2. BYOS – build your own shell
 - 3. Sockets & Threads in HTTP server
 - 4. Memory mapping and management
 - 5. MALLOC
- Three (and $\frac{1}{2}$) Group Projects
 - 0. Getting Started (Individual, before you have a group)
 - 1. User-programs (exec & syscall)
 - 2. Threads & Scheduling
 - 3. File Systems

Group Projects

- Project teams have 4 members!
 - never 5, 3 requires serious justification
 - Must work in groups in “the real world”
 - Same section (at least same TA)
- Communication and cooperation will be essential
 - Regular in-person meetings very important!
 - Joint work on Design Documents
 - Slack/Messenger/whatever doesn’t replace **face-to-face!**
- Everyone should do work and have clear responsibilities
 - You will evaluate your teammates at the end of each project
 - Dividing up by Task is the worst approach. Work as a team.
- Communicate with supervisor (TAs)
 - What is the team’s plan?
 - What is each member’s responsibility?
 - Short progress reports are required
 - **Design Documents: High-level description for a manager!**

Lec 1.47

Getting started

- **EVERYONE (even if you are on the waitlist!): Start homework 0 right away (hopefully Today!), project 0 next week**
 - Github account
 - VM environment for the course
 - » Consistent, managed environment on your machine
 - Get familiar with all the cs162 tools
 - Submit to autograder via git
- First two weeks, attend any section you want
 - We’ll assign permanent sections after forming project groups
 - Section attendance will be mandatory after we form groups
 - These section times will be adjusted after we have a better idea where people are

1/18/2022

Joseph & Kubiatowicz CS162 © UCB Spring 2022

Lec 1.48

Joseph & Kubiatowicz CS162 © UCB Spring 2022

Lec 1.48

Preparing Yourself for this Class

- The projects will require you to be very comfortable with programming and debugging C
 - Pointers (including function pointers, void*)
 - Memory Management (malloc, free, stack vs heap)
 - Debugging with GDB
- You will be working on a larger, more sophisticated code base than anything you've likely seen in 61C!
- **Review Session on the C language**
 - Time and logistics TBA, but soon!
- "Resources" page on course website
 - Ebooks on "git" and "C"
- C programming reference (still in beta):
 - <https://cs162.eecs.berkeley.edu/ladder/>
- First two sections are also dedicated to programming and debugging review:
 - Attend ANY sections in first two weeks

1/18/2022

Joseph & Kubiatowicz CS162 © UCB Spring 2022

Lec 1.49

Grading (Tentative breakdown)

- 36% three midterms (12% each)
 - Thursday, 2/17, TBA, time set after survey
 - Thursday, 3/17, TBA, time set after survey
 - Thursday, 4/28, TBA, time set after survey
 - These will be IN-PERSON!
- 36% projects
- 18% homework
- 10% participation (Sections, Lecture, ...)
- *No final exam*
- Projects
 - Initial design document, Design review, Code, Final design
 - Submission via *git push* triggers autograder

1/18/2022

Joseph & Kubiatowicz CS162 © UCB Spring 2022

Lec 1.50

Personal Integrity

- UCB Academic Honor Code: "As a member of the UC Berkeley community, I act with honesty, integrity, and respect for others."

<http://asuc.org/honorcode/resources/HC%20Guide%20for%20Syllabi.pdf>

1/18/2022

Joseph & Kubiatowicz CS162 © UCB Spring 2022

Lec 1.51

CS 162 Collaboration Policy

Explaining a concept to someone in another group

Discussing algorithms/testing strategies with other groups

Discussing debugging approaches with other groups

Searching online for generic algorithms (e.g., hash table)

Sharing code or test cases with another group

Copying OR reading another group's code or test cases

Copying OR reading online code or test cases from prior years

Helping someone in another group to debug their code

- We compare all project submissions against prior year submissions and online solutions and will take actions (described on the course overview page) against offenders
- Don't put a friend in a bad position by asking for help that they shouldn't give!

1/18/2022

Joseph & Kubiatowicz CS162 © UCB Spring 2022

Lec 1.52

Lecture Goal

Interactive!!!
Ask Questions in Chat

1/18/2022

Joseph & Kubiatowicz CS162 © UCB Spring 2022

Lec 1.53

What makes Operating Systems
Exciting and Challenging?

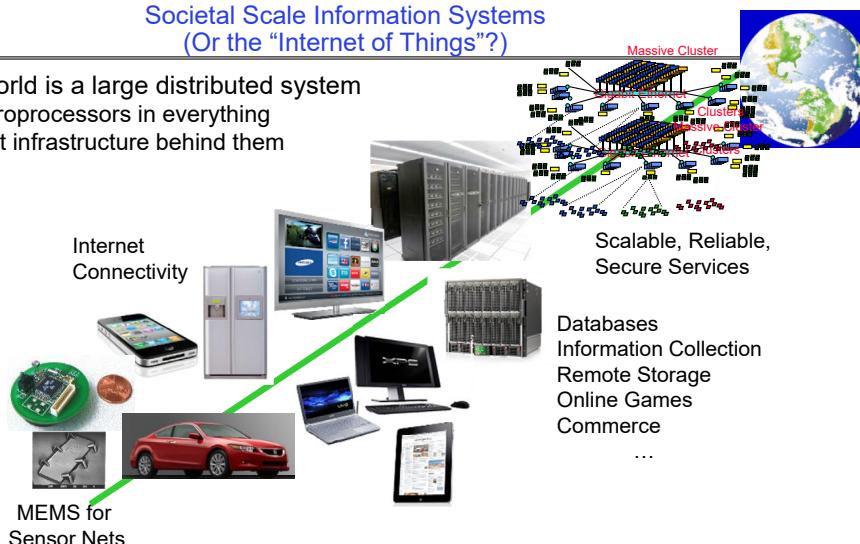

1/18/2022

Joseph & Kubiatowicz CS162 © UCB Spring 2022

Lec 1.54

Societal Scale Information Systems (Or the “Internet of Things”?)

- The world is a large distributed system
 - Microprocessors in everything
 - Vast infrastructure behind them

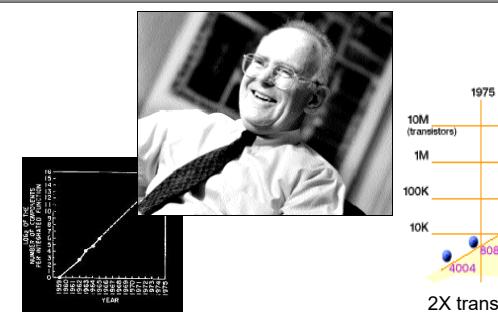

1/18/2022

Joseph & Kubiatowicz CS162 © UCB Spring 2022

Lec 1.55

Technology Trends: Moore's Law

Gordon Moore (co-founder of Intel) predicted in 1965 that the transistor density of semiconductor chips would double roughly every 18 months

2X transistors/Chip Every 1.5 years
Called “Moore’s Law”

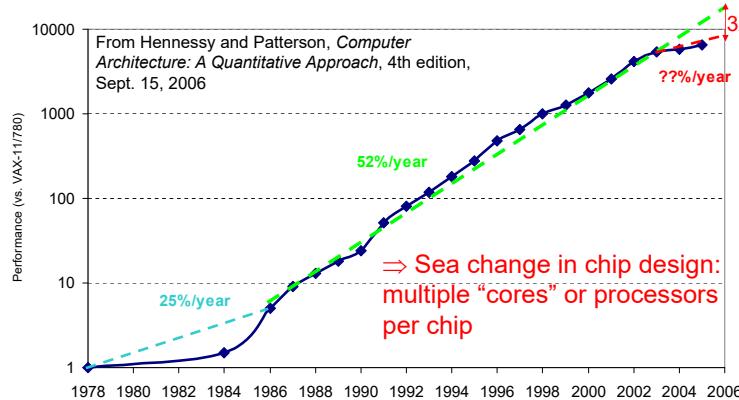

Microprocessors have become smaller, denser, and more powerful

1/18/2022

Joseph & Kubiatowicz CS162 © UCB Spring 2022

Lec 1.56

Big Challenge: Slowdown in Joy's law of Performance

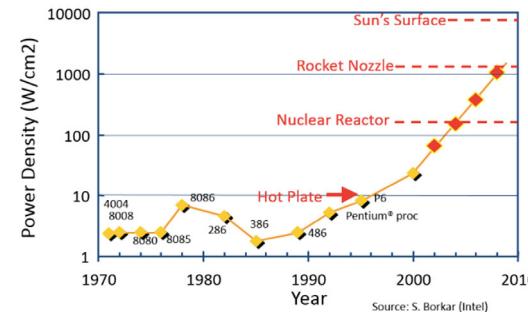

- VAX : 25%/year 1978 to 1986
- RISC + x86 : 52%/year 1986 to 2002
- RISC + x86 : ??%/year 2002 to present

Joseph & Kubiakowicz CS162 © UCB Spring 2022

1/18/2022

Lec 1.57

Another Challenge: Power Density

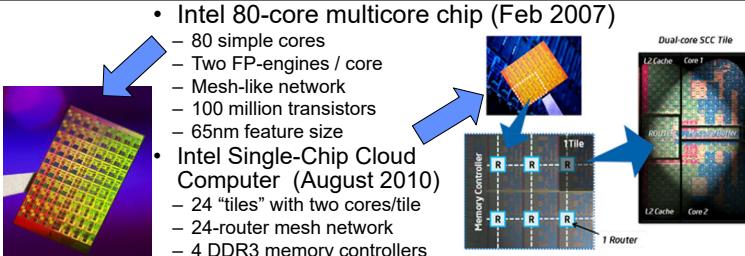

- Moore's law extrapolation
 - Potential power density reaching amazing levels!
- Flip side: battery life very important
 - Moore's law yielded more functionality at equivalent (or less) total energy consumption

Joseph & Kubiakowicz CS162 © UCB Spring 2022

Lec 1.58

ManyCore Chips: The future arrived in 2007

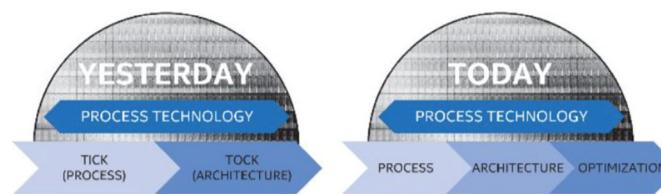

- Intel 80-core multicore chip (Feb 2007)
 - 80 simple cores
 - Two FP-engines / core
 - Mesh-like network
 - 100 million transistors
 - 65nm feature size
- Intel Single-Chip Cloud Computer (August 2010)
 - 24 "tiles" with two cores/tile
 - 24-router mesh network
 - 4 DDR3 memory controllers
 - Hardware support for message-passing
- How to program these?
 - Use 2 CPUs for video/audio
 - Use 1 for word processor, 1 for browser
 - 76 for virus checking???
- Parallelism must be exploited at all levels
- Amazon X1 instances (2016)
 - 128 virtual cores, 2 TB RAM

1/18/2022

Joseph & Kubiakowicz CS162 © UCB Spring 2022

Lec 1.59

But then Moore's Law Ended...

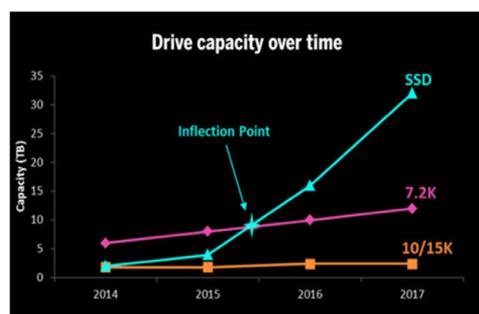

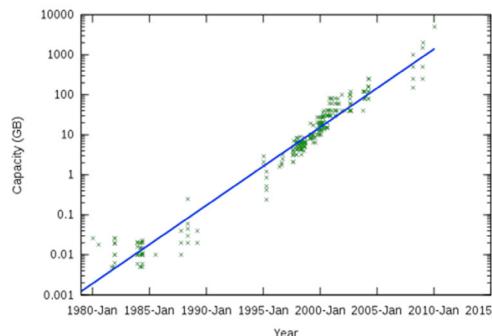

- Moore's Law has (officially) ended -- Feb 2016
 - No longer getting 2 x transistors/chip every 18 months...
 - or even every 24 months
- May have only 2-3 smallest geometry fabrication plants left:
 - Intel and Samsung and/or TSMC
- Vendors moving to 3D stacked chips
 - More layers in old geometries

Joseph & Kubiakowicz CS162 © UCB Spring 2022

Lec 1.60

Storage Capacity is Still Growing!

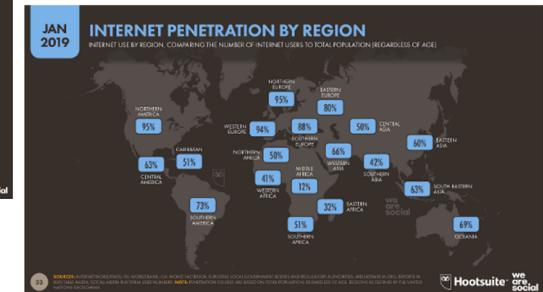

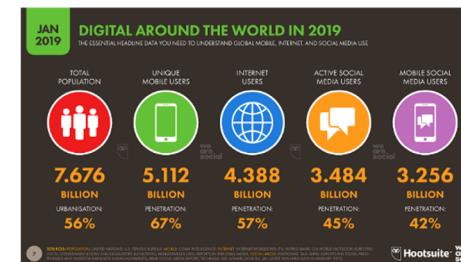

1/18/2022

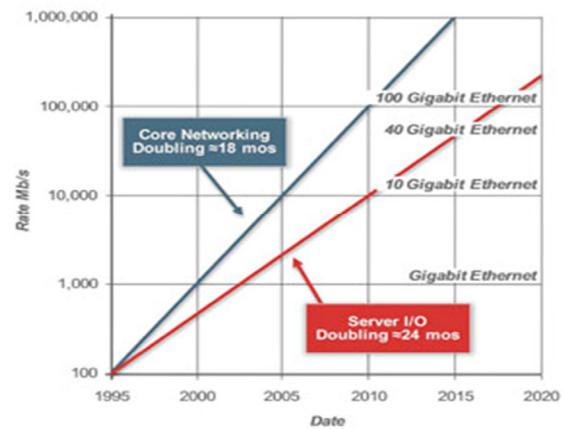

Joseph & Kubiatowicz CS162 © UCB Spring 2022

Lec 1.61

Society is Increasingly Connected...

Network Capacity Still Increasing

1/18/2022

Joseph & Kubiatowicz CS162 © UCB Spring 2022

Lec 1.63

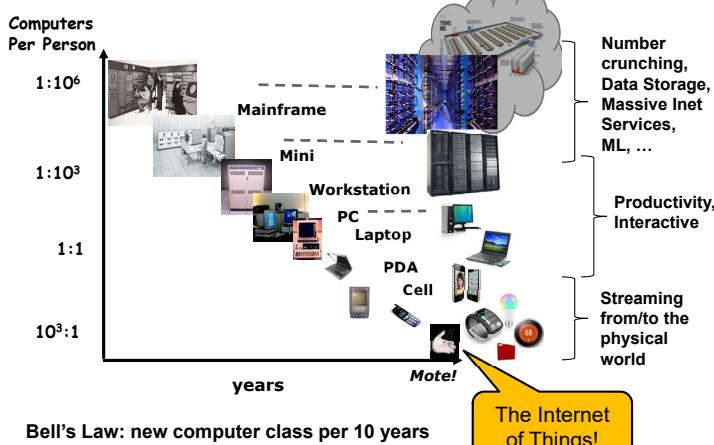

Not Only PCs connected to the Internet

- In 2011, smartphone shipments exceeded PC shipments!
- 2011 shipments:
 - 487M smartphones
 - 414M PC clients
 - 210M notebooks
 - 112M desktops
 - 63M tablets
 - 25M smart TVs
- 1.53B in 2017
- 262.5M in 2017
- 164M in 2017
- 39.5M in 2017
- 4 billion phones in the world → smartphones over next few years
- Then...

Joseph & Kubiatowicz CS162 © UCB Spring 2022

Lec 1.64

People-to-Computer Ratio Over Time

1/18/2022

Joseph & Kubiakowicz CS162 © UCB Spring 2022

Lec 1.65

1/18/2022

Lec 1.66

What is an Operating System Again?

- Referee
 - Manage sharing of resources, Protection, Isolation
 - » Resource allocation, isolation, communication
- Illusionist
 - Provide clean, easy to use abstractions of physical resources
 - » Infinite memory, dedicated machine
 - » Higher level objects: files, users, messages
 - » Masking limitations, virtualization
- Glue
 - Common services
 - » Storage, Window system, Networking
 - » Sharing, Authorization
 - » Look and feel

Joseph & Kubiakowicz CS162 © UCB Spring 2022

Lec 1.66

Challenge: Complexity

- Applications consisting of...
 - ... a variety of software modules that ...
 - ... run on a variety of devices (machines) that
 - » ... implement different hardware architectures
 - » ... run competing applications
 - » ... fail in unexpected ways
 - » ... can be under a variety of attacks
- Not feasible to test software for all possible environments and combinations of components and devices
 - The question is not whether there are bugs but how serious are the bugs!

1/18/2022

Joseph & Kubiakowicz CS162 © UCB Spring 2022

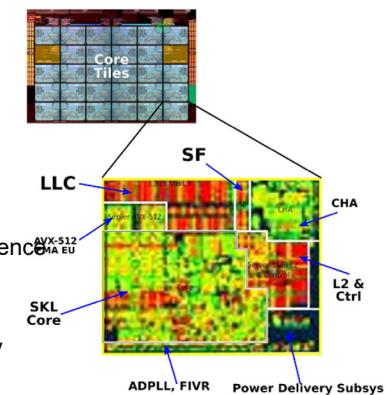

Lec 1.67

1/18/2022

Lec 1.68

The World Is Parallel: Intel SkyLake (2017)

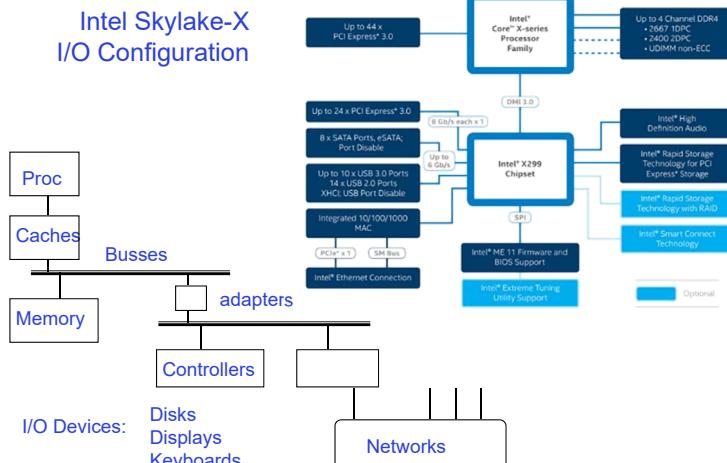

- Up to 28 Cores, 56 Threads
 - 694 mm² die size (estimated)
- Many different instructions
 - Security, Graphics
- Caches on chip:
 - L2: 28 MiB
 - Shared L3: 38.5 MiB (non-inclusive)
 - Directory-based cache coherence
- Network:
 - On-chip Mesh Interconnect
 - Fast off-chip network directly supports 8-chips connected
- DRAM/chips
 - Up to 1.5 TiB
 - DDR4 memory

Joseph & Kubiakowicz CS162 © UCB Spring 2022

Lec 1.68

HW Functionality comes with great complexity!

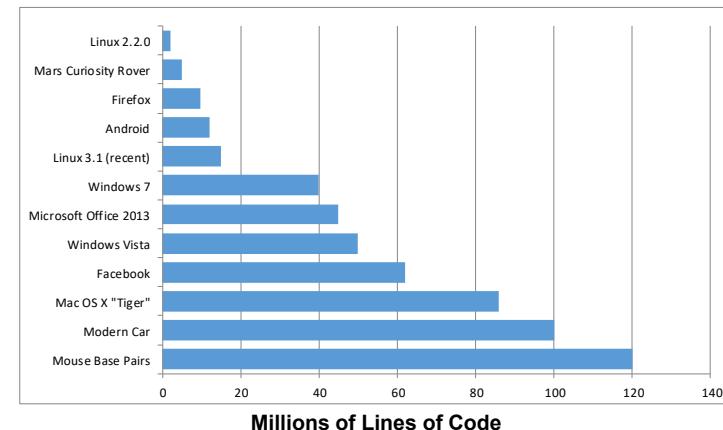

1/18/2022

Joseph & Kubiakowicz CS162 © UCB Spring 2022

Lec 1.69

Increasing Software Complexity

(source <https://informationisbeautiful.net/visualizations/million-lines-of-code/>)

1/18/2022

Joseph & Kubiakowicz CS162 © UCB Spring 2022

Lec 1.70

Example: Some Mars Rover ("Pathfinder") Requirements

- Pathfinder hardware limitations/complexity:
 - 20Mhz processor, 128MB of DRAM, VxWorks OS
 - cameras, scientific instruments, batteries, solar panels, and locomotion equipment
 - Many independent processes work together
- Can't hit reset button very easily!
 - Must reboot itself if necessary
 - Must always be able to receive commands from Earth
- Individual Programs must not interfere
 - Suppose the MUT (Martian Universal Translator Module) buggy
 - Better not crash antenna positioning software!
- Further, all software may crash occasionally
 - Automatic restart with diagnostics sent to Earth
 - Periodic checkpoint of results saved?
- Certain functions time critical:
 - Need to stop before hitting something
 - Must track orbit of Earth for communication
- A lot of similarity with the Internet of Things?
 - Complexity, QoS, Inaccessibility, Power limitations ... ?

1/18/2022

Joseph & Kubiakowicz CS162 © UCB Spring 2022

Lec 1.71

Questions

- Does the programmer need to write a single program that performs many independent activities?
- Does every program have to be altered for every piece of hardware?
- Does a faulty program crash everything?
- Does every program have access to all hardware?

Hopefully, no!

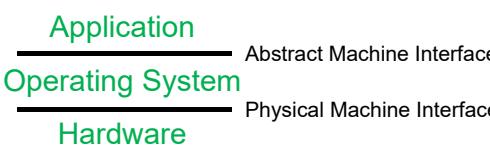

Operating Systems help the programmer write robust programs!

1/18/2022

Joseph & Kubiakowicz CS162 © UCB Spring 2022

Lec 1.72

OS Abstracts the Underlying Hardware

- Processor → Thread
 - Memory → Address Space
 - Disks, SSDs, ... → Files
 - Networks → Sockets
 - Machines → Processes
- OS as an *Illusionist*:
- Remove software/hardware quirks (*fight complexity*)
 - Optimize for convenience, utilization, reliability, ... (*help the programmer*)
- For any OS area (e.g. file systems, virtual memory, networking, scheduling):
- What hardware interface to handle? (physical reality)
 - What's software interface to provide? (nicer abstraction)
- 

1/18/2022

Joseph & Kubitowicz CS162 © UCB Spring 2022

Lec 1.73

OS Protects Processes and the Kernel

- Run multiple applications and:
 - Keep them from interfering with or crashing the operating system
 - Keep them from interfering with or crashing each other

Lec 1.74

Basic Tool: Dual-Mode Operation

- Hardware provides at least two modes:
 - Kernel Mode (or "supervisor" mode)
 - User Mode
- Certain operations are **prohibited** when running in user mode
 - Changing the page table pointer, disabling interrupts, interacting directly w/ hardware, writing to kernel memory
- Carefully controlled transitions between user mode and kernel mode
 - System calls, interrupts, exceptions

Lec 1.78

[Operating System Definition \(Cont.\)](#)

- No universally accepted definition
- “Everything a vendor ships when you order an operating system” is good approximation
 - But varies wildly
- “The one program running at all times on the computer” is the **kernel**
 - Everything else is either a system program (ships with the operating system) or an application program

Lec 1.80

[What is an Operating System,... Really?](#)

- Most Likely:
 - Memory Management
 - I/O Management
 - CPU Scheduling
 - Communications? (Does Email belong in OS?)
 - Multitasking/multiprogramming?
- What about?
 - File System?
 - Multimedia Support?
 - User Interface?
 - Internet Browser? ☺
- Is this only interesting to Academics??

Lec 1.78

[“In conclusion...Operating Systems:”](#)

- Provide convenient abstractions to handle diverse hardware
 - Convenience, protection, reliability obtained in creating the illusion
- Coordinate resources and protect users from each other
 - Using a few critical hardware mechanisms
- Simplify application development by providing standard services
- Provide fault containment, fault tolerance, and fault recovery
- CS162 combines things from many other areas of computer science:
 - Languages, data structures, hardware, and algorithms
